SUMMARY

Full-stack software engineer with 2+ years building production systems in C#/.NET, React, and TypeScript on Azure. Sole architect and developer of a multi-tenant payroll integration platform now live for a national HR/payroll provider, processing 186,000+ records monthly. Comfortable across the whole stack – distributed cloud services, IAM, CI/CD and IaC, and the web and mobile interfaces on top.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, HTML, CSS, SQL, Python

Backend: ASP.NET Core, .NET 8/9/10, EF Core, Azure Serverless Functions, REST APIs, Node.js, OAuth 2.0, OpenID Connect

Frontend: React, TanStack (Query, Router, Start), Vite

Cloud: Azure (Functions, Durable Functions, Service Bus, SQL, Entra ID, Key Vault, App Service, Static Web Apps, Container Apps), AWS (Lambda, S3, EC2), Cloudflare (Workers, D1, R2), Firebase/GCP

DevOps & Practices: AI-assisted development (Claude Code, GitHub Copilot), GitHub Actions, Docker, Terraform, CI/CD design, distributed systems, multi-tenant architecture, ETL pipelines, RBAC, unit/integration/E2E testing, Agile

EXPERIENCE

Seven Hills Technology – *Software Developer*

Full-Time June 2026 – Present

Consultancy building custom software for regional and national clients.

Co-op May 2024 – May 2026

Multi-Tenant Payroll Integration Platform – *National HR/payroll SaaS provider*

June 2026 – Present

- Shipped a multi-tenant payroll integration platform to production in ~3 months as sole architect and developer – a configurable ETL job runner now processing 186,000+ records monthly.
- Built a React admin dashboard (Static Web Apps + ASP.NET Core API, Entra ID OIDC) for live health monitoring of every tenant, integration, and job run; hardened execution with retries, idempotency, Slack alerting, and CI merge gates.
- Owned the full delivery lifecycle as sole technical contact across four parties – our team, the client, external vendors, and the payroll provider – including integration logic and production support.

Mobile & Web Platform Support – *Horse racing media company*

May – June 2026

- Uncovered a years-old revenue defect blocking ad delivery to ~24,000 monthly active users (~60%) by instrumenting the mobile ad path with live monitoring events.
- Shipped self-serve audience segmentation for the mobile push notification tool, letting admins target any subset of 123,000+ registered users through a set of filters.

E-Commerce Ordering Platform – *Regional restaurant group, 33 locations*

June 2024 – Jan 2026

- Drove 30,000+ monthly orders and \$1,500,000+ in monthly gross sales across 33 locations by replacing a rigid templated ordering system with a fully custom frontend, backend, data warehouse, and admin platform on Azure.
- Wrote the majority of the ASP.NET Core backend and React frontends as one of 3 engineers over ~14 months, then supported it in production for 5 more.

London Computer Systems – *Software Developer Co-op*

Spring & Fall of 2023

- Shipped 9 features to an Angular tenant portal, delivered 12 features to a .NET Framework REST API, and refactored deprecated serialization across hundreds of endpoints with zero regressions.

Hyland Software – *Research and Development Intern*

Summers of 2020, 2021, and 2022

- Built and tested a cloud-native ETL pipeline on AWS Lambda and MongoDB Atlas for an AI product alongside 5 senior engineers, with Terraform and Jenkins IaC deploys under 10 seconds.

PROJECTS

UC Mountaineering Club Gear Inventory Platform – *ucmc.spencerwill.com*

May 2026 – Present

- Building a platform on TanStack Start and Cloudflare Workers to replace Excel inventory for a 100-member club managing ~1,900 pieces of gear – barcode checkout and return, passkey (WebAuthn) auth, and RBAC; sole owner of architecture, deployment, and DNS.

reMind – *AI Voice Assistant for Memory Care* – *Senior Capstone*

August 2025 – April 2026

- Built a realtime voice-to-voice agent on Apple Watch for memory-care patients and a caregiver user interface. It features local tool calling, live fall and distress detection with alerting, semantic conversational memory store and summarization, and semantic vector search using pgvector; authored a custom Swift WebSocket library streaming audio to Azure AI Foundry's realtime model.

EDUCATION & LEADERSHIP

University of Cincinnati

Graduated May 2026

BS, Computer Science; Minor in Mathematics | Summa Cum Laude, GPA 3.99 | 3x Mantei/Mae Award Recipient

UC Competitive Climbing Club – President (2024 – 2025), Team Captain (2023 – 2024). Coached 25+ members across 5 USA Climbing competitions per season; managed club operations, executive board, and university and regional gym partnerships.
